

SANAN MAMMADOV

Full-Stack Developer (PHP/Laravel + React)

+994 50 783 29 95 | 1memmedovsenan@gmail.com | linkedin.com/in/senan-memmedov

PROFESSIONAL SUMMARY

Full-Stack Developer with 2+ years of experience building and maintaining production web applications end-to-end. Proven track record shipping RESTful APIs and MVC backends in Laravel and CodeIgniter, and dynamic frontends in React (Redux, Context API). Comfortable owning deployment and server administration on Linux (Nginx/Apache, SSL, CI/CD). Seeking to bring full-stack ownership and reliability-focused engineering to a remote-first team.

PROFESSIONAL EXPERIENCE

Full Stack Developer • Afea Group

May 2025 – Present

- Design, build, and maintain full-stack features end-to-end — Laravel/CodeIgniter backends following MVC architecture paired with React frontends — powering production applications used daily by clients.
- Build and document RESTful APIs and consume them in React interfaces, implementing authentication, input validation, and structured error handling across both layers to reduce integration bugs.
- Refactored legacy modules and optimized MySQL queries through indexing and Eloquent best practices, cutting redundant code and improving response times on high-traffic endpoints.
- Built and maintained React UI components and state logic, bridging frontend and backend work on the same features to ship consistent, reliable user experiences.
- Own end-to-end deployment on Ubuntu Linux servers — configuring Nginx/Apache, SSL certificates, and cron jobs, and proactively monitoring logs and performance via SSH.
- Actively participate in peer code reviews on pull requests, giving and receiving feedback to uphold code quality, consistency, and adherence to clean-code standards across the codebase.
- Partner with product stakeholders in sprint planning to scope and ship full-stack features on schedule.

Junior Frontend Developer • Vabiss

Feb 2024 – Feb 2025

- Built core features for REIS GRC, an enterprise Governance, Risk & Compliance platform, using React.js across multiple release cycles.
- Implemented scalable state management with Redux and React Context API across multiple feature modules, reducing prop-drilling and simplifying cross-component data flow.
- Integrated RESTful APIs with robust loading, error, and edge-case handling, improving UI reliability and reducing user-facing errors.
- Built reusable, accessible UI components with HTML, CSS, and Tailwind CSS, establishing consistent design patterns reused across the platform.

ICT Support Assistant • COP29 — UN Climate Change Conference

Nov 2024

- Delivered on-site IT support to international delegations and the global COP technical team during a high-visibility UN event with zero tolerance for downtime.
- Diagnosed and resolved hardware, network, and software issues under time-critical conditions, ensuring uninterrupted conference operations for thousands of attendees.

EDUCATION

Master's in Digital Government • Azerbaijan Technical University

2025 – Present

Bachelor's in Information Technology • Academy of the State Customs Committee

2021 – 2025

GPA: 89/100 • Relevant coursework: Web Development, Object-Oriented Programming, Database Systems, Algorithms

TECHNICAL SKILLS

Languages: PHP, JavaScript, TypeScript, SQL, HTML5, CSS3

Frontend: React.js, Next.js, Vue.js, Redux, Context API, Tailwind CSS

Backend: Laravel, CodeIgniter, RESTful APIs, MVC Architecture

Databases: MySQL, PostgreSQL — schema design, indexing, query optimization

Server & DevOps: Linux (Ubuntu), Nginx, Apache, SSH, SSL/TLS, cPanel, Docker (basics), CI/CD (GitHub Actions)

Tools: Git, GitHub, Bitbucket

Practices: Clean Code, Code Review, API Design, MVC, Refactoring

LANGUAGES

Azerbaijani — Native English — Intermediate (B2)
